

## Craniocervical Junction Protocol

**Reviewed By:** Justin Waters, MD

**Last Reviewed:** January 2020

**Contact:** (866) 761-4200, Option 1

**Use:** Only for strongly suspected injury to the craniocervical junction. MUST HAVE CONCURRENT OR RECENT (within 1 month) routine cervical spine MRI.

**General:** 3T preferred

**FOV:** Small FOV of craniocervical junction from the mid-clivus to the bottom of C2. The FOV should not extend much beyond the outer diameter of the osseous structures at C1 and C2

**Slice Thickness:** 1 mm

### Sequences:

- Axial 3D SPACE (or CUBE) with sagittal and coronal reformations
- <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC5023438/> Please see this article for relevant imaging examples.
